

treatment

non-surgical facelift

(titan - intelligent pulsed light therapy)

Titan is a non-surgical treatment that delivers a unique range of light energy to heat the skin's dermis layer - well below the skin's surface. This heating can cause immediate collagen contraction resulting in tighter skin.

Light Years Younger

The new Titan provides a natural alternative to actively turn back the clock on ageing skin. Using light energy to stimulate new collagen growth deep beneath your skin's surface, Titan can tighten skin on your face, arms, abdomen, and legs.

It's an ideal solution to enhance your youthful and healthy appearance without surgery, recovery time or injections.

Skin Tight in a New Light

Titan utilizes a safe infrared light source with a unique wavelength filter design to uniformly heat the dermis, whilst the epidermis is protected by continuous contact cooling with the Titan hand piece. This non-invasive treatment heats the deep dermis to lift and tighten the skin so that gravity changes are softened, fine wrinkles are less obvious and pores are shrunk.

It is a non ablative, non-surgical lifting procedure which causes the collagen in the dermis to contract and tighten. It can be used for tightening skin over various areas of the body, including the forehead, the lower face along the chin line, under the eyes, the hands, the abdomen, around the knees, and in some cases the breasts.

What areas respond best to the Titan procedure?

Patients have been successfully treated on many areas of the body where skin is lax. Loose skin on the abdomen, back of the upper arm, along the jaw line and under the chin have responded particularly well to the procedure.

New mothers have found Titan a much swifter route back to a flat tummy after giving birth.

Who can be treated?

Since the Titan procedure is the heating of tissue under the skin's surface, patients of any skin type can be treated. Men and women of all ages have been successfully treated. Our consultant can advise you if Titan is right for you.

How many treatments will I need?

A single treatment can produce very good results for many patients. Our consultant will recommend the number and frequency of treatments to achieve optimal results for you.

What do treatments feel like?

With each Titan pulse, you will feel a brief heating sensation. For some patients a mild pain reliever can be beneficial taken beforehand, however many patients are quite comfortable without anything.

Freephone 0800 6800731

Amazing... My open pores looked smaller, my cheeks were plumped and my jawline more defined. I can't recommend this treatment enough, it's transformed my skin.

Are there any side effects?

Because the heat is applied deep within the skin, some swelling and redness may be seen. Both should dissipate within a few hours. Our consultant can provide you with complete information on the benefits and risks prior to the treatment.

When will I see results?

Some patients see results immediately. For most patients, the results are seen gradually over a three to six month period as new collagen is formed and the skin tightens.

Titan and Laser Peel combination

The medical consultant will recommend if there are any other treatments which would complement your Titan experience, to further enhance the skin rejuvenation programme. However, depending upon your skin type, we have found the combination of Titan and a chemical peel can provide you with an "immediate" and satisfying exterior lift, whilst Titan carries on working deep below the surface as collagen rebuilds.

TITAN Tissue Tightening Benefits

- Look years younger!
- Treats lax and sagging skin
- Treats any area of the body such as the neck, chin, abdomen, knees, forehead and crow's feet
- Stimulates long-term collagen growth
- Alternative to liposuction and injected fillers and muscle relaxing drugs
- Safe, comfortable and non-surgical
- NO downtime

How Does Titan Work?

Titan's safe, infrared light heats the dermis well below the skin's surface causing immediate collagen contraction. During the treatment, the skin's surface (epidermis) is protected through continuous cooling.

The infrared light travels through the epidermis to the deeper layers of the skin causing tightening of the collagen architecture.

The procedure takes approximately one hour, and the results of Titan Skin Tightening Technology may be seen within a few weeks of the treatment.

The advantage of the Titan over the therma-lifting techniques is that the skin and underlying fat is heated uniformly avoiding differential heating of the fat, making the risk of dents and atrophy much less likely.

After the procedure, new collagen growth gradually results in further tightening and you will notice a more youthful complexion with less lines, folds or looseness. The results are usually not seen immediately but the full benefits are usually observed within three to six months.
